    "title": "Last.app API",
    "description": "# Introduction\nYour integration is going to be linked with a Location, which belongs to an Organization.\nEach location can have more than one brand (Sushi, Poke, Burgers, ...). And each brand can have more than one catalog, with a different set of products.\n\nWhen you create a new Tab, it has to be linked to a specific brand (brand ids are unique, the same brand in different locations has a different id). Then we will route the tab to the right location under the right brand name.\n\nPlease go to our developer portal to add your integration.\n\n# Authentication\nFor both the Rest API and the webhooks we use the same authentication method. We will share with you an unique and secret token as a integrator, and in all the requests it has to be included as a header.\n\n`Authorization: Bearer \\${token}`\n\n[How to get it?](#tag/FAQ1)\n\nYou should also include in every endpoint (except this [one](#tag/API-Organizations/operation/OrganizationList), an extra header LocationID or OrganizationID.\nLook in every endpoint in AUTHORIZATIONS Field to know which one should be added.\n\n# Rate limits\nThere are 2 rate limits applying to all endpoints:\n- Rate limit of 1500 reqs every 10 min indexed by token / entity.
\n- Rate limit of 15 reqs every second indexed by token / entity.
\n\nAnd there is an specific rate limit only applying to [/organizations](#tag/API-Organizations/operation/OrganizationList) endpoint:\n- Rate limit of 1 reqs every second indexed by token.
\n\nBeing an entity a `LocationId` or `OrganizationId` which should be added as a header.\nLook in every endpoint in AUTHORIZATIONS Field to know which one should be added.\n\n# Migration Guide\nImport changes if you come from V1:\n- We have defined for most entities 2 schemes to be shared with you: *Simple scheme* and *Complete scheme*.
\nNote that **GET routes which returns a LIST** are returning entities with **simple scheme** format.
\nOn the other hand, **GET routes which returns a SINGLE ELEMENT** are returning entities with **complete scheme** format.
\nThe first example of this new behaviour is found on [Locations](#tag/API-Locations).
\nLook response samples of Location List and Location by ID\n\n- [Tokens](#tag/FAQ8) have completely changed:
\n**On V1**, a token allows an integrator to operate over **an organization.**
\nSo every integrator had a token for every organization.
\n**On V2**, a token allows an integrator to operate over **ALL his organizations.**\n\n# Development tools\n- Please once you have created your integrator on Developer Portal, go to Store section.\nThere you will be able to create a dummy organization with 1 location to test your integration.\nThis location will be created with a dummy floorplan, catalog, schedules, etc.\n- Note that once you have created this organization, Store Section will change and you will have 2 direct access to the POS and Admin.\n- To start testing your integration, remember to go to the admin, to the integrations sections and add your integration.\n\n# Integrators\n- Your integrator should be registered on our Developer Portal.\nIt will have the following statuses: [Test](#tag/FAQ2), Pending and Production.\n - When your integrator is on **Test / Pending** statuses, only dummy location which you create on Developer Portal or Prod locations where you can login with your developer user, will be able to use it.\n - When your integrator is on **Prod**, it's gonna be visible by **all our locations on their Admin Marketplace**.\nSo please, apart from selecting your capabilities and webhooks, have a time to edit your integrator on Developer Portal (logo, name, description, ...)\nLet restaurants know how you can help them in their daily lives!\n\n- When a restaurant wants to integrate with you, we ask them:\n 1) A the name for the integration\n 2) An externalId (this is their unique identifier on your system, so if needed help restaurants to get it)\n\n[Do you have a question?](#tag/FAQ12)\n\n# Real Time Loyalty\n\nLastApp API supports EXTERNAL customers and promotions.\n\nTo use this loyalty feature, you must implement the following 2 GET endpoints:\n\n[GET Customer by phone number](#operation/getCustomerByPhoneNumber)\n\n[GET Customer Promotions by phone number](#operation/getCustomerPromotionsByPhoneNumber)\n\nYou can specify these endpoints URLs on your integrator configuration on Developer Portal.\n\nWhen the POS tries to link a person to a

tab with their phone number:\n\n1) If the customer doesn't exist yet on LastApp, we will call your 1st endpoint to get your customer data.\n\n2) We will call the 2nd endpoint to get the available promotions for this customer.\n",
